

History

The Competitive Edge in the Information Age

Education and experience gained from an industrial background - but not because that knowledge is unnecessary in the current era available when needed in today's work-based virtual experience laboratory.

The virtual laboratory is the industrial history of the information age. It can replicate the development processes of the industrial era.

People everywhere talk about the competitive edge needed in education or academic preparation in the global marketplace. Much of this talk is just rhetoric on the elements of the competitive edge, but we would be wise to remember Cluskey's comment that "upon the education of the people the strength of the nation depends."
