## **Course Description**

Software-defined (SD) systems are IT systems that can be programmatically managed. In particular, SD systems can be made capable of self-management, self-healing, self-tuning, self-configuration and self-protection. This course introduces concepts in SD systems to beginning graduate students. The concepts include hardware and software models, systems software and software platforms, optimization techniques, predictive modeling, experiment design, adaptive and feedback-based computing, monitoring techniques and applications in networking, cluster systems, cloud computing, storage, data systems, systems management and datacenters. 3 credits.

## **Course Pre-Requisites / Co-Requisites**

EEL 5737 or EEL 6892

## **Course Objectives**

Large-scale computer and software systems are increasingly complex, diverse and outsourced to computational clouds and other large infrastructures. The cooperative management of these systems by either their owners or their providers can only be done effectively and efficiently if programmatic interfaces are exposed for that purpose. This requires computer systems designers to understand a variety of fundamental modeling concepts and management techniques spanning multiple system layers, for both the systems to be designed and the components and services used to build these systems. This course objectives include (1) teaching these models and techniques to students, and (2) teaching illustrative cases of software-defined systems deployed in industry and academia for a variety of computer, storage and networking applications.

## Attendance Policy, Class Expectations, and Make-Up Policy

Attendance is expected from students in order to properly follow class progress. There are no explicit penalties for absence. Cell phones must be off or on mute. Additional class policy guidelines are provided in a separate class policies document. Homeworks returned late or missed receive a grade reduction in proportion to the delay in submission, possibly resulting in a grade of zero. Unless communicated to the instructor in advance, missed exams receive a grade of zero. If communicated in advance, make-up exams must take place prior to original exam date. Make-up exams will take place only under exceptional documented circumstances. Excused absences must be in compliance with university policies in the Graduate Catalog (<http://gradcatalog.ufl.edu/content.php?catoid=10&navoid=2020#attendance>) and require appropriate documentation.

## Evaluation of Grades

Grades are based on student performance on homework, in-class midterm exam, individual project contribution and an in-class presentation.

Assignment	Total Points	Percentage of Final Grade
Homework Sets (2)	200	25%

### ***Students Requiring Accommodations***

Students with disabilities requesting accommodations should first register with the Disability Resource Center (352-392-8565, <https://www.dso.ufl.edu/drc>) by providing appropriate documentation. Once registered, students will receive an accommodation letter which must be presented to the instructor when requesting accommodation. Students with disabilities should follow this procedure as early as possible in the semester.

### ***Course Evaluation***

Students are expected to provide professional and respectful feedback on the quality of instruction in this course by completing course evaluations online via GatorEvals. Guidance on how to give feedback in a professional and respectful manner is available at <https://gatorevals.aa.ufl.edu/students/>. Students will be notified when the evaluation period opens, and can complete evaluations through the email they receive from GatorEvals, in their Canvas course menu under GatorEvals, or via <https://ufl.bluera.com/ufl/>.
