1. Supplemental Material:

Specific Course Information

1. **Catalog Description:** Fabrication, Layout, Analysis and design of digital and circuits using MOS Transistors
2. **Prerequisites or Co-requisites:** EEL 3396, EEL 3308
3. **Required, Elective, or Selected Elective (Table 5-1):**

Specific Goals for the Course

1. Specific Outcomes of Instruction:

This course focuses on analysis and design of modern digital circuits. Silicon technology and transistors are introduced and described from a digital point of view, and the performance of various circuits is derived and estimated. CMOS digital circuits will be designed and analyzed. Students will have a semester long team SRAM chip design project using commercial software Cadance. Project will cover advanced topics such as manufacturing variations.

1. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by this course:**

EE2, a, c, e, I, k
