3. **Required, Elective, or Selected Elective (Table 5-1):**

Specific Goals for the Course

1. **Specific Outcomes of Instruction:**

This course focuses on analysis and design of modern digital circuits. Silicon technology and transistors are introduced and described from a digital point of view, and the performance of various circuits is derived and estimated. CMOS digital circuits will be designed and analyzed. Students will have a semester long team SRAM chip design project using commercial software Cadance. Project will cover advanced topics such as manufacturing variations.

1. **Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by this course:**

EE2, a, c, e, i, k
