Course Description

3 credits. A broad introduction to cloud and distributed computing, big data platforms and intelligent platforms. It covers system architecture, programming models, algorithmic design, and big data applications. Selected applications will be used as case studies.

Course Pre-Requisites / Co-Requisites

EEL 5737 or EEL 5764. Instructor approval possible if student demonstrates familiarity with algorithms, data structure, computer systems, and programming (such as Java, Python, C/C++, Go, Scala). (To request a prerequisite waiver the student should email to registration@ece.ufl.edu).

Course Objectives

Large-scale computer and software systems are increasingly complex, diverse and distributed to computational clouds and other large infrastructures. The use of these systems requires understanding of the interfaces provided by cloud systems and their unique advantages, such as scalability, reliability and on-demand usage. Learning objectives include (1) how to understand the fundamental aspects of distributed computing, (2) how to examine cloud computing software stacks, and (3) how to identify, construct, combine and evaluate cloud platforms for data analytics, high-performance computing, information processing, data communication and intelligent systems.
